Re: recycled content information

PRL Aluminum is a supplier of Aluminum extrusions. All extrusions provided by PRL are manufactured in our City of Industry facility. The raw material used in the production of aluminum extrusions are known as billet. We obtain our billet from multiple manufactures that provide us with product containing recycled/scrap content

The average to date mix of recycled content is:

|                             |       |
|-----------------------------|-------|
| Pre consumer scrap content  | 11.6% |
| Post consumer scrap content | 42.6% |
| Total scrap content         | 54.2% |
